Fume Extraction Systems

From paint spraying to welding, many processes within industrial settings can create extremely harmful fumes - including chemical and acid fumes. When breathed in by those in the workplace, these fumes can cause breathing problems such as asthma and even more serious long-term conditions such as cancer.

Alongside directly risking the health of employees, fume particles that are not extracted from the workplace also pose a risk to health through contamination of food, drink and pharmaceuticals - as well as possibly damaging the finish of products.

In all these instances, a fume extraction system is essential to removing airborne particles and returning clean air to the workspace. By making Integrated Air Systems your fume extraction partner, you can rest assured that your workplace is safe, protected by years of experience, dedication and high quality.

Benefits of Our Fume Extraction Systems

- **Capture & contain the fume**
at source away from the breathing zone
- **Improved cleaner, healthier working environment**
- **Productivity gains**
by reduced operator sickness absence
- **Compliance with health & safety**
guidance HSG258 / COSHH
- **Reduce the risk of potential explosion**
- **Enhanced quality**
of product and the plant machinery
